

Facts about Breast Cancer

- Breast cancer is curable if detected early.
- **Mammography** detects breast cancer at the earliest stage, when it is still curable.
- If breast cancer is detected early, breast conserving surgery is possible, rather than more extensive surgery such as mastectomy.
- **Mammography** is a safe procedure.
- **Digital mammography** is better because it provides higher quality images and requires less breast compression.

October is Breast Cancer Awareness Month

If you have any questions about mammography, please feel free to email us at inforxdx@telradsol.com
